
Subject: Child Food Packages

Effective Date: July 5, 2005

Revised from:

Policy: The child food package shall be customized to meet the client's nutritional needs, food preferences, food intolerances and/or household conditions. The reason for issuing a non-standard food package must be documented in the child's KWIC record.

The standard child food packages contain 4 containers of juice. This provides children with approximately 6 – 6 ½ oz. per day. The American Academy of Pediatrics (AAP), Committee on Nutrition policy statement, "The Use and Misuse of Fruit Juice in Pediatrics" recommends that the intake of fruit juice should be limited to 4 - 6 oz. per day for children 1 - to 6-years old. The amount of juice issued to a child may be increased to the maximum (6 containers) on an individual basis if the CPA determines and documents that the child has a need for increased juice.

Children under 2 years of age may not receive peanut butter. Other WIC clients over 2-years old may be issued either dried beans or peanut butter. Peanut butter is not issued before 2-years of age because it can stick to the roof of the mouth and cause choking.

The food package should be issued on the minimum number of checks available unless the rationale for spreading the food package out over a larger number of checks is documented in the client's KWIC record. Reasons to increase the number of checks issued per month may include inadequate storage/refrigeration or inability to transport the larger quantity of food.

The food package shall be customized to prescribe infant formula(s), exempt infant formulas, and medical foods if medically indicated. (See Policy: FCI: 02.02.01 Child Food Packages - Special Formula)

Procedure:

Prescribe an age and situation appropriate food package (see Table)
